Curbing Emissions

Nazery Khalid, discusses efforts to address the issue of climate change in the shipping sector.

The issue of global warming has become a topic that requires urgent attention by individuals, industries and governments. Visible adverse impacts of an increasingly stricken Mother Nature demand that concrete actions are taken to mitigate global warming. The spate of signs and disasters related to climate change painted a grim picture of a world whose balance has been upset by changing weather patterns.

Human activities have contributed much to the problem. As world population grows and demand for natural resources, commodities, space, goods and services grow, humans have exerted enormous strain to the earth's resources and atmosphere. Analysts have expressed doubts if the earth can absorb further economic and population growth without
